

Washing Machine Leak Detection + Automatic Shut-Off System

RS-090

FloodMaster's Washing Machine Leak Alarm & Automatic Water Shut-Off System can help you prevent extensive water damage when a washing machine leaks – a common cause of costly insurance claims and deductibles. Such damages are more extensive with upstairs laundry rooms and apartments located above the ground floor.

When the FloodMaster sensor puck detects a water leak, the system sounds an audible alarm and the dual valve automatically shuts off both the hot and cold water supply lines.

RS-090 SPECIFICATIONS

Electrical:

Transformer: 120 VAC, cUL listed

Actuator: CE listed

Plumbing:

Brass fitting; typical pipes

(2) high-pressure stainless steel hose, 6" long or greater, included

Cable Lengths:

Power Cord: 12'

ORDERING INFORMATION

Valve Size	P/N	UPC
Dual-Port 3/4"	RS-090	857640005335

Patent #6,035,699

BENEFITS

- Reduce risk of water damage with automatic water shut-off of both hot and cold water lines – even if you aren't home to hear the alarm
- Easy installation
- System is reusable – when the alarm sounds, fix the problem and reset unit for continued protection
- No wiring is necessary – simply plug in to a standard wall outlet (120 VAC)
- Installation may make you eligible for an insurance discount
- Transformer is cUL listed; actuator is CE listed
- Unit can interface with a home security alarm system or appropriate relay

OPTIONAL ACCESSORIES & ADD-ONS*

- **Sensing Rope Kit** – The Sensing Rope is ideal for room perimeter and sub-floor leak detection applications. *P/N RSA-175-810*
- **Auto Dialer** – A convenient, low-cost add-on to send and receive automatic alerts whenever your FloodMaster system identifies a fault condition. *P/N RSA-600-003*

* All sold separately.

Typical Installation

The FloodMaster RS-090 is most commonly installed in conjunction with residential washing machines, in-line between the hot and cold water faucets and the water line connections on the washer. While typical installations have a manual lever for water flow shut-off, these require hands-on action to shut down the water flow. If no one is home when a leak occurs, the resulting water damage can be catastrophic!

The FloodMaster system provides constant monitoring and automatic water shutoff when leaking water comes in contact with the sensor puck. Place the sensor on the floor near or under the washer where water is likely to accumulate during a leak, and we'll take care of the rest!
