

Water Leak Detection & Alarm System

RS-095 (Wired Sensor – 9V Battery Powered)

Above: **RS-095 Water Alarm**

Specifications

Power:

Requires one 9V battery (not included)

FloodMaster's RS-095 simple water alarm system is designed to sound an audible alarm when the sensor comes in contact with just 1/32" of any non-flammable conductive liquid (such as water).

The RS-095 model is a battery-powered unit (9-volt battery not included) that is self contained and can be placed where a potential leak or overflow may occur. This fully transportable sensor can be repositioned as your need for an early leak detection alarm changes. The sensor has a 6-foot wire so it can be extended into a sump pit, or mounted on a wall and stretched to another location.

A plug-in leak alarm that can accommodate multiple sensors and interface with a security system is also available (Model RS-096).

Benefits

- Loud (110 dB) alarm sounds with only 1/32" of water detected at the sensor
- Easy installation
- Up to 100 ft. of speaker wire can be spliced into the line to extend the reach of the sensor
- One sensor per unit

Typical Installations

- Leaky drains
- Frozen pipes
- Dishwashers
- Washing machines
- Hot water heaters
- Sump pumps
- Tubs
- Table-top containers and beakers
- Sinks
- Above/near data processing rooms

Features & Benefits	RS-095 (Wired Sensor)
Power Source	9V Battery
Audible Alarm	Yes
Optional Signal Wire	No
Sensor Range	6'
Silence Button	No
